Dear Sirs

RE: McGEOCH TECHNOLOGY LTD

Angel Trains are one of the largest owners of railway rolling stock; we own over 4400 rail passenger vehicles which we lease to most of the train operating companies in the UK.

We can confirm that McGeoch Technology Ltd collaborated with Angel Trains to introduce McGeoch LED rail lights in selected UK train compartments on board rolling stock.

In 2008 Angel Trains invited McGeoch to develop and supply rail carriage LED lighting which replaced florescent lighting on our class 153 passenger units; the class 153's were one of the first passenger trains in the UK to use LED technology for complete passenger saloon area illumination.

The lights have been in service since installation with significant improvements in illumination levels and electrical energy cost. Further maintenance savings have also been realised.

Since installation we have had no reported issues with the LED lights supplied by McGeoch Technology nor any maintenance requirements. We are happy that the various savings and the level of illumination achieved have met our original expectations.

The lights supplied to Angel Trains by McGeoch Technology were assessed and fully approved against all relevant rail standards.

Yours faithfully
